Disclaimer

Doxex reports are not, nor should be considered, an "endorsement" or "disapproval" of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any "product" or "asset" created by any team.

Doxex do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc'...)

Doxex Audits do not provide any warranty or guarantee regarding the absolute bugfree nature of the technology analyzed, nor do they provide any indication of the technology proprietors. Doxex Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

Doxex Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. Doxex's position is that each company and individual are responsible for their own due diligence and continuous security. Doxex in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

The Social Network for Cryptocurrency Enthusiasts

Connect with 1406 like-minded individuals and freely discuss your favorite topics or tokens without fear of censorship or commercial use of your data.

Build Your Community

Create your own crypto community where you can post, share, and discuss everything crypto-related

Your Data is Yours

We believe that the information you share with us should be yours to keep, not ours. With us, you're in full control

Project Engagement

During the 25th of JULY 2022, PAYBYMETA engaged Doxex to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Doxex with access to their code repository and whitepaper.

Contract

v2.0

BSCSCAN Contract: 0x709A5419f1316B52E31b0dca49E2ED8268765064

Background

Doxex was commissioned by PAYBYMETA to perform an audit of smart contracts

0x709A5419f1316B52E31b0dca49E2ED8268765064

The purpose of the audit was to achieve the following:

Ensure that the smart contract functions as intended.

Identify potential security issues with the smart contract.

The information in this report should be used to understand the risk exposure of the smart contract, and as a guide to improve the security posture of the smart contract by remediating the issues that were identified.

Issues Checking Status

1. Compiler errors. 2. Race conditions and Reentrancy. Cross-function race Passed conditions. 3. Possible delays in data delivery. 4. Oracle calls. 5. Front running. 6. Timestamp dependence. 7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12. The impact of the exchange rate on the logic. 13. Private user data leaks. 14. Malicious Event log. 15. Scoping and Declarations. 16. Uninitialized storage pointers. 17. Arithmetic accuracy. 18. Design Logic. PASSED	Issue description	Checking	status
3. Possible delays in data delivery. 4. Oracle calls. 5. Front running. 6. Timestamp dependence. 7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12. The impact of the exchange rate on the logic. 13. Private user data leaks. 14. Malicious Event log. 15. Scoping and Declarations. 16. Uninitialized storage pointers. 17. Arithmetic accuracy.	1. Compiler errors.		PASSED
4. Oracle calls. 5. Front running. 6. Timestamp dependence. 7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12. The impact of the exchange rate on the logic. 13. Private user data leaks. 14. Malicious Event log. 15. Scoping and Declarations. 16. Uninitialized storage pointers. 17. Arithmetic accuracy. PASSED	2. Race conditions and Reentrancy. Cross-function race Passed	conditions.	PASSED
5. Front running. 6. Timestamp dependence. 7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12. The impact of the exchange rate on the logic. 13. Private user data leaks. 14. Malicious Event log. 15. Scoping and Declarations. 16. Uninitialized storage pointers. 17. Arithmetic accuracy.	3. Possible delays in data delivery.		PASSED
6. Timestamp dependence. 7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12. The impact of the exchange rate on the logic. 13. Private user data leaks. 14. Malicious Event log. 15. Scoping and Declarations. 16. Uninitialized storage pointers. 17. Arithmetic accuracy.	4. Oracle calls.		PASSED
7. Integer Overflow and Underflow. 8. DoS with Revert. 9. DoS with block gas limit. 10. Methods execution permissions. 11. Economy model of the contract. 12.
